## INTRODUCTION

This document describes the major steps, organizational responsibilities and timing of the Ministry's Operational Planning Process. The process follows a 12 month cycle, commencing in April with a report on the outlook for the following fiscal year, and ending in March with a final report on the Ministry's work plan and detailed budget. Implementation of this work plan then begins.

In-year processes for expenditure and manpower control, and for periodically making adjustments in priorities and resources allocations, take effect with the implementation but are not discussed in this document.

These guidelines have been developed on the assumption of a "normal" planning year. The actual timing of a number of events must, in fact, be flexible in order to adjust to the timing of the Central Agencies. There is considerable variation from year to year in the dates that targets and instructions are received by the Ministry.

The Operational Planning Process is designed in concert with the Strategic Planning Process and the Policy Development Process. Both the information available from these processes and the timing of the various events of the processes must be consistent.

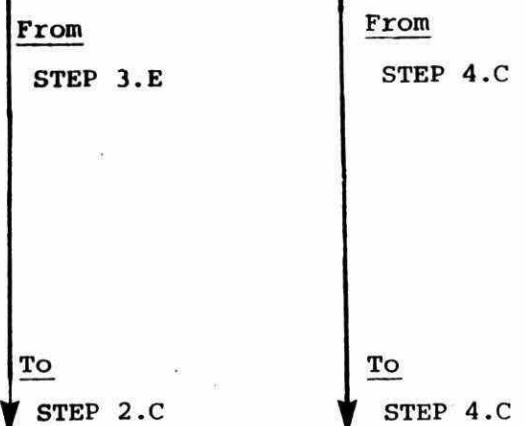

The relationship to the Strategic Planning Process is shown in Figure 1.
